

K-GUARD

K-GUARD is a field installable PFP cover, custom designed and manufactured to allow field installation to existing CPCE. Constructed from molded K-MASS[®] and tested in compliance with the UL1709 fire test curve, K-GUARD allow the protected equipment to operate and survive for minimum 30 minutes when exposed rapid temperature rise, in excess of 1093°C/2000°F. Levers and wheels can be extended outside the covers to allow equipment to be operated without removal of the PFP covers.

K-GUARD features and benefits

- Exceeds the requirements of API 607 for valves.
- Can be installed on fully operational equipment to meet UL 1709
- Can be retrofitted on previously installed equipment.
- Can be fitted with fireproof glass/windows.
- Allows testing without removal of K-GUARD.
- Easy maintenance access to the protected equipment because of split cover clam shell design.
